

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)
Department of Artificial Intelligence and Data Science
ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	VIMALA K	Reg. No.:	192424276
Section / Batch:	B.Tech(AI&DS)	Date:	16/07/2026

Code of Conduct

I VIMALA K (192424276) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: vimalak

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary	Word Generation, Semantic Transformation	TP-09

Expansion		
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10
Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12
Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	Technical Content Accuracy	Problem Identification	Use of Tools	Communication	Professionalism	Total %
15	3	3	4	4	4	86

A COMPARATIVE STUDY

Machine Learning and Natural Language Processing

DSA0306 - NATURAL LANGUAGE PROCESSING

**Presented by:
Vimala K (192424276)**

**GUIDED BY:
Dr. T. KUMARAGURUBARAN**

Definition

Machine Learning (ML)

- A branch of Artificial Intelligence (AI)
- Enables computers to learn from data without being explicitly programmed
- Improves performance by learning patterns

EXAMPLE

Predicting whether an email is Spam or Not Spam, based on patterns learned from previous email data.

Natural Language Processing

- A branch of AI that enables computers to understand, process, and generate human language
- Focuses on text and speech data

EXAMPLE

Google Translate converting an English sentence into Tamil.

Primary Goal

Machine Learning

- Learn patterns from data
- Predict future outcomes
- Classify data

EXAMPLE

Predicting whether a customer will buy a product.

NLP

- Understand the meaning of human language
- Process text and speech
- Generate meaningful responses

EXAMPLE

A chatbot answering customer questions.

Input Data

Machine Learning

Uses many different types of data:

Numbers

Images

Videos

Audio

Text

Sensor data

EXAMPLE

House price prediction using area, number of rooms, and location.

NLP

Uses only language-related data:

Text

Speech

Documents

Conversations

EXAMPLE

Customer product reviews collected from Amazon.

Techniques Used

Machine Learning

- Decision Tree
- Random Forest
- Support Vector Machine (SVM)
- Logistic Regression
- Neural Networks

EXAMPLE

Using Random Forest to detect fraudulent bank transactions.

NLP

- Tokenization
- Stop Word Removal
- Stemming & Lemmatization
- POS Tagging
- Named Entity Recognition (NER)

EXAMPLE — NER

"John lives in Chennai."

John → Person **Chennai** → Location

Output

Machine Learning

- Predictions
- Classifications
- Recommendations

EXAMPLE

Predicting whether a student will pass or fail an exam.

NLP

- Translation
- Sentiment
- Summaries & chatbot responses

EXAMPLE

"The movie was amazing."

Output: **Positive Sentiment**

Applications

Machine Learning

Fraud Detection

Face Recognition

Medical Diagnosis

Recommendation Systems

Stock Price Prediction

NLP

Chatbots

Google Translate

Voice Assistants

Sentiment Analysis

Spam Detection

Netflix recommends movies based on viewing history (ML) · **Amazon** analyzes product reviews to determine customer sentiment (NLP)

Real-World Example

Machine Learning

Problem: Predict whether a customer will repay a bank loan.

INPUT

- Salary
- Age
- Credit Score

OUTPUT

Loan Approved

Loan Rejected

NLP

Problem: Analyze customer feedback.

INPUT

"The product quality is excellent."

OUTPUT

Positive Review

Relationship Between ML and NLP

- Machine Learning is a broad field of AI
- NLP is a specialized field focused on human language
- Modern NLP applications often use Machine Learning algorithms

NLP builds on Machine Learning to move from raw language to actionable meaning.

Key Differences

Machine Learning	NLP
Learns from all types of data	Works mainly with text and speech
Predicts outcomes	Understands language
Uses ML algorithms	Uses language-processing techniques
Broad AI field	Specialized AI field
Example: House Price Prediction	Example: Google Translate

CONCLUSION

Two Fields, One Direction

- Machine Learning enables computers to learn from data and make predictions
- Natural Language Processing enables computers to understand and process human language
- NLP often uses Machine Learning models to improve accuracy and performance

Machine Learning

Predicting house prices from area, rooms, and location.

Natural Language Processing

Translating English into Tamil.

Thank you
